

PRT-Lami Oy
Naturally Wood

Glulam timber

Wood, naturally

Wood has been the principal material used in Finnish construction and furnishing for centuries. Its beauty, originality and durability coupled with easy workability make it an unbeatable building material. Glulam timber creates new

potential for the use of wood in modern construction. Thanks to its versatility, glulam timber is a sensible choice. It is a fireproof solution for support structures and an elegant feature in interior design.

PRT-Lami Oy a multi-skilled timber processing company

PRT Lami glulam is manufactured by PRT-Lami Oy, part of PRT Forest, a major Finnish timber processing group. In addition to its sawmill operations, PRT-Lami Oy manufactures tailored timber products: e.g. planed, impregnated and finger-jointed. The company mainly uses slowly grown, close-grained, sound knot Northern wood. PRT-Lami can also deliver tailored, cut to size, strength graded timber at short notice.

PRT-Lami Oy also supplies finger-jointed sawn timber.

The maximum height and width of PRT Lami glulam beams are 1,500 mm and 27,000 mm respectively.

PRT Lami glulam timber

PRT Lami glulam is synonymous with high quality. Separate checks are carried out at each stage to ensure strong products of uniform quality with a faultless finish. Lami is manufactured in compliance with international quality certificate standards and the environmentally aware principles of sustainable development.

PRT Lami is a first class semi-finished product ideal for use in laminated logs and other laminated products such as pergolas, poles and pilars due to its faultless quality surface finish.

GLULAM TIMBER SIZES

Beams

Maximum sizes:
length 28,000 mm
height 1,400 mm
thickness 240 mm

	90	115	140	165	190	215	240	Width
180								
225								
270								
315								
360								
405								
450								
495								
Height								

Pillars

Maximum length:
28,000 mm

	90	115	135	165	190	215	240	Width
90								
115								
135								
165								
190								
215								
240								
Height								

The pillars and beams can be tailored to customer requirements.
